To provide the best user experience when you print from a native Windows program, the program must be designed to print from a dedicated thread.. Printing operations can require periods of intense computation as the application content is rendered for the printer, which can prevent the program from responding to user interaction if this processing is performed in the same thread as event processing of the user interaction.. If you are already familiar with how to write a multi-threaded native Windows program, you go directly to How to print from a Windows application and learn how to add printing functionality to your program. 773a7aa168 [The Armenian History Attributed To Sebeos Pdf File](#)
